

COMESA WORKINGS AND PROCESSINGS ON THE CTH RULE

PART I

Introductory notes to the list in Part II to Appendix V regarding working and processing carried out on non- originating materials that confers origin.

Note 1

The list in Part II sets forth the workings and processes for determining the country of origin of a good under Rule 2(1)(b)(iii) of the Protocol on Rules of Origin for Products to be traded between member States of the Common Market for Eastern and Southern Africa (hereinafter referred to as the Protocol). These workings and processes shall be subject to review by the Council of Ministers.

Note 2

For the purposes of Part II to Appendix V:

- (a) “non-originating materials” means materials imported from outside the Common Market for Eastern and Southern Africa;
- (b) “materials” means raw materials, semi-finished products, products, ingredients, parts and components used in the production of goods;
- (c) “manufacture” means any kind of working or processing including assembly or specific operations;
- (d) “product” means the product being manufactured, even if it is intended for later use in another manufacturing operation;
- (e) “goods” means both materials and products;
- (f) “HS code” refers to the Chapters and headings (four-digit codes) used in the nomenclature which makes up the Harmonized System;
- (g) “classified” refers to the classification of a product or material under a particular heading.

Note 3

3.1 Rules of origin that refer to a change in tariff heading, in terms of Rule 2(1)(b)(iii) of the Protocol, apply to non-originating materials only and such change in classification is at the level of the Harmonized Commodity Description and Coding System (hereinafter referred to as the Harmonized System or “HS”) by reason of production, other than by minimal operations or processes defined in Rule 5 of the Protocol.

3.2 For purposes of applying Rule 2(1)(b)(iii) of the Protocol, the rules set out in Column C of Part II to Appendix V apply to non-originating materials used in manufacturing and apply only in relation to such materials. Accordingly, it follows that if an originating product is used in the manufacture of another product, the rules set out in Column C applicable to the product in which it is incorporated do not apply to it, and no account shall be taken of the non-originating materials, which have been used in its manufacture.

3.3 References to HS code number in Column A in Part II are references as they appear in the Harmonized System, as amended and in force. Classification of goods within the Harmonized System is governed by the General Interpretative Rules and any relative notes to that system. Classification of goods for purposes of the rules of origin is also governed by the General Interpretative Rules and any relative notes to the Harmonized System.

3.4 The first two Columns in Part II describe the product obtained. Column A gives the heading used in the HS and Column B gives the description of goods used in that system for that heading or Chapter. For each entry in Columns A and B, a rule is specified in Column C.

3.5 Where a Chapter number is given in Column A, and the description of goods in Column B is therefore given in general terms, the adjacent rules in Column C apply to all products which, under the HS are classified in headings of the Chapter.

3.6 Where the entry in the first column is preceded by an “ex”, this signifies that the rules in Column C apply only to that part of that heading as described in Column A.

Note 4

4.1 The rules specified in Column C represent the minimum amount of working or processing required and the carrying out of more working or processing also confers originating status; conversely, the carrying out of less working or processing cannot confer originating status.

4.2 Where a rule in Column C specifies that a product must be manufactured from a particular material, the rule obviously does not prevent the use of other materials, which because of their inherent nature cannot satisfy the rule.

Example 1:

The rule for prepared foods of heading 19.04, which specifically excludes the use of cereals and their derivatives, does not prevent the use of mineral salts, chemicals and other additives, which are not products from cereals.

Example 2:

If a rule in Column C says that for a particular textile item, yarn must be used, this does not prevent the use of metal items, such as buttons, because they cannot be made from textile materials.

However, this does not apply to products, which, although they can be manufactured from the particular materials specified in Column C can be produced from a material of the same nature at an earlier stage of manufacture.

Example:

In the case of an article of apparel of Chapter 62 made from non-woven materials, if the use of only non-originating yarn is allowed for this class of article, it is not possible to start from non-woven cloth, even if non-woven cloths cannot normally be made from yarn. In such cases, the starting material would normally be at the stage before yarn, that is, the fibre stage.

Mineral fuels, mineral oils and products of their distillation; bituminous substances; mineral waxes

The following Chapter Rule shall apply to products of Chapter 27.

Chemical reaction

A “chemical reaction” shall be taken to be a process (including a biochemical process), which results in a molecule with a new structure by breaking intra molecular bonds and by forming new intra molecular bonds or by altering the spatial arrangement of atoms in a molecule.

The following are not considered to be chemical reactions for the purposes of this definition:

- (a) dissolving in water or other solvents;
- (b) the elimination of solvents including solvent water; or
- (c) the addition or elimination of water of crystallization.

Specific processes that confer origin:

Goods of headings 27.07 and 27.10 through 27.13 that have been obtained as a result of a chemical reaction as defined in Note 4.1 or as a result of a physical separation process such as those listed below are deemed to be goods of the country where the reaction or process occurred:

- (a) atmospheric or vacuum distillation;
- (b) redistillation by fractionation process (including extractive distillation);
- (c) cracking;
- (d) catalytic reforming;
- (e) desulphurisation (removal of bound sulphur);
- (f) alkylation (including dehydroalkylation, hydroalkylation);
- (g) hydrogenation;
- (h) extraction by means of selective solvents;
- (i) the process comprising all the operations: processing with concentrated sulphuric acid, oleum or sulphuric anhydride, neutralization with alkaline agents;
- (j) polymerisation;
- (k) isomerisation;
- (l) deparaffining by a process other than filtering, in respect of products falling within heading 27.10 only;
- (m) in respect of fuel oils, falling within heading ex 27.10, atmospheric distillation, on condition that less than 30% of these products are distilled, by volume, including losses, at 300C by the ASTM D 86 method;
- (n) in respect of heavy oils other than gas oils and fuel oils falling within heading ex 27.10 only, treatment by means of a high-frequency electrical brush-discharge;
- (o) aromatic production processes;
- (p) dehydrogenation;
- (q) process for production of normal paraffins; and
- (r) sulphur compound sweetening.

Mixing and blending

For the purposes of headings 27.07 and 27.10 to 27.15, the deliberate and proportionally controlled mixing or blending (including dispersing) of materials to conform to predetermined specifications which results in the production of a good having physical, chemical characteristics which are relevant to the purposes or uses of the good and are different from the input materials is to be considered origin conferring.

List of simple processes which do not confer origin:

- cleaning
- decantation
- desalination
- water separation
- filtering
- colouring
- marking
- any combinations of these operations
